

Steps of Ablative Surgery: Pelvis

1. Bladder diverticulectomy
2. Radical cystectomy
3. Partial cystectomy
4. Pelvic LND
5. Radical prostatectomy
6. Orchidectomy for intra abdominal testis

O - Observed procedure, A – Assisted with procedure, P – Performed the procedure

Procedure step	Number of operations for proficiency																		Difficulty 1-10
Anterior bladder dissection	O																		4
	A																		
	P																		
Posterior prostate and bladder pedicle dissection	O																		8-BMI<35 10-BMI>35
	A																		
	P																		
SV dissection	O																		5
	A																		
	P																		
PLND	O																		6-BMI <35 8-BMI>35
	A																		
	P																		
Orchidectomy	O																		2
	A																		
	P																		
Prostatic apex dissection	O																		7- wide PA 9-narrow PA
	A																		
	P																		
Bladder-urethra anastomosis	O																		10
	A																		
	P																		
Bladder reconstruction	O																		7-8
	A																		
	P																		
Ureter dissection	O																		5
	A																		
	P																		

PA – pubic arch
